Read this carefully before moving on.

Please, clearly specify whether the statement in question is *true* or *false*, for the *prove* or *disprove* type of questions. As always, it is highly encouraged for you to write each step clearly with full sentences.

As a demonstration of a proof answer, consider the following example.

The above statement is **true**.

Proof. ...

□

As a demonstration of a disproof answer, consider the following example.

The above statement is **false**.

Proof. ...

□

Note 1 (Notations)

The following notations will be used throughout the following questions.

- $\mathbb{Z}$: A set of all integers.
- $\mathbb{Z}^+$: A set of all positive integers. i.e., $\mathbb{Z}^+ = \{1, 2, 3, \dots\}$.
- $\mathbb{Z}_n$: A set of non-negative integers from 0 to $n - 1$ for some positive integer n . For instance, $\mathbb{Z}_4 = \{0, 1, 2, 3\}$.
- $n\mathbb{Z}$: A set given as $\{nx \mid x \in \mathbb{Z}\}$ for an integer n . i.e., the set of all multiples of n in $\mathbb{Z}$. For instance, $5\mathbb{Z} = \{\dots, -10, -5, 0, 5, 10, \dots\}$.
- $\mathbb{Q}$: A set of all rational numbers.
- $\mathbb{R}$: A set of all real numbers.
- $\mathbb{R}^+$: A set of all positive real numbers.
- $\mathbb{C}$: A set of all complex numbers.
- $A + B$: A set given as $\{a + b \mid a \in A, b \in B\}$. For instance, $\mathbb{Z}_2 + \mathbb{Z}_3 = \{(0 + 0), (0 + 1), (0 + 2), (1 + 0), (1 + 1), (1 + 2)\} = \{0, 1, 2, 3\}$

Definition 2 (Subset)

Given two sets A and B , A is said to be a subset of B if the following condition holds.

If x is an element of A , then x is an element of B .

Definition 3 (Extensionality)

Two sets A and B are said to be equal if and only if A is a subset of B and B is a subset of A . This is called the *axiom of extensionality*. If two sets A and B are equal, we write $A = B$.

Q1.

EASY

Let A and B be two sets. Let $A(x)$ mean x is an element of A , and $B(x)$ mean x is an element of B .

Which of the following is equivalent to saying that $A \subset B$?

- ☐ 1. $B(x) \rightarrow A(x)$
☐ 2. $\text{not } A(x) \rightarrow B(x)$
☐ 3. $\text{not } A(x) \rightarrow \text{not } B(x)$
- ☐ 4. $A(x) \rightarrow \text{not } B(x)$
☐ 5. $\text{not } B(x) \rightarrow \text{not } A(x)$

Definition 4 (Roots of unity)

Let μ_n denote the set of all complex solutions to an equation of form $x^n = 1$ for a positive integer n . Elements of such a set are called n -th roots of unity.

For instance, $\mu_2 = \{1, -1\}$.

Q2.

EASY

Show that $\mu_2 \subset \mu_4$.

Q3.

EASY

Prove or disprove that $\mathbb{Z} \subset n\mathbb{Z} + m\mathbb{Z}$ for any two distinct positive integers n and m .

Hint 5. Provide concrete n and m that make up a counterexample. Try justifying your answer by using the definition of set builder notation.

Q4.

HARD

Prove or disprove that $2\mathbb{Z} + 3\mathbb{Z} = \mathbb{Z}$.

Hint 6. cf. lecture note.

The statement is ✓ true.

Proof. By Definition 3, we need to show that both $2\mathbb{Z} + 3\mathbb{Z} \subset \mathbb{Z}$ and $\mathbb{Z} \subset 2\mathbb{Z} + 3\mathbb{Z}$ hold.

$2\mathbb{Z} + 3\mathbb{Z} \subset \mathbb{Z}$. Recall that $2\mathbb{Z} + 3\mathbb{Z}$ is a set given by $\{2x + 3y \mid x \in \mathbb{Z}, y \in \mathbb{Z}\}$. If n is an element of $2\mathbb{Z} + 3\mathbb{Z}$, then there exist integers x and y such that $n = 2x + 3y$. From here, we conclude that n is an integer, as $2x$ and $3y$ are integers and their sum is also an integer. (cf. PCSA Q2)

$\mathbb{Z} \subset 2\mathbb{Z} + 3\mathbb{Z}$. Let n be an integer. First, let's try to find two integers x and y such that $1 = 2x + 3y$. For instance, there are $x = 2$ and $y = -1$ such that $1 = 2(2) + 3(-1)$. Now, we multiply both sides by n to get $n = n(2x + 3y) = 2xn + 3yn = 2(xn) + 3(yn)$. As n is a sum of a multiple of 2 and a multiple of 3, it is an element of $2\mathbb{Z} + 3\mathbb{Z}$.

By extensionality, we conclude that $2\mathbb{Z} + 3\mathbb{Z} = \mathbb{Z}$. □

In fact, any two coprime integers n and m have the same property, i.e., $n \perp m \rightarrow n\mathbb{Z} + m\mathbb{Z} = \mathbb{Z}$ for integers n, m . Moreover, not only in $\mathbb{Z}$, but in any *principal ideal domain*, the *ideal* generated by two coprime elements is the entire ring.

HARD

Q5.

Show using [Definition 2](#) that for any two positive integers n and m , $\mu_n \subset \mu_{nm}$.

Hint 7. Of course, it is a generalization of [Q2](#).

Q6.**HARD**

Show by [Definition 3](#) that $\mathbb{Z}_n + \mathbb{Z}_n = \mathbb{Z}_{2n-1}$ for any positive integer n .

Hint 8. cf. PCSA Q4.

Q7.**HARD**

Prove or disprove that if $\mathbb{Z} = n\mathbb{Z}$ for an integer n , then either $n = 1$ or $n = -1$.

Hint 9. What are the factors of 1 and -1 ?

Definition 10 (Symmetric difference)

$A \triangle B$ is a binary set operation given by $(A \setminus B) \cup (B \setminus A)$ and is called a *symmetric difference* between A and B .

Q8.**LEVI**

Problem by [@escentia07](#).

Prove or disprove that $A \triangle B \subset C$ if and only if $A \cup B \subset (A \cap B) \cup C$.

Q9.**LEVI**

For an integer n , let $M(k)$ denote the set $\{x \mid x \equiv k \pmod{n}\}$. Let P be the set given by $P = \{M(k) \mid k \in \mathbb{Z}\}$.

(a) Show that every two distinct elements of P are disjoint.

Hint 11. Use [Definition 3](#) and contraposition.

(b) Show that the following holds for any two integers a and b by [Definition 3](#).

$$M(a) + M(b) = M(a + b)$$

LEVI

Q10.

Problem by @escentia07.

Let $f(x) = x^{2^{121}} + x - 1$

How many real solutions does the equation $f^{2026}(x) = x$ have? Justify your answer.

Answer: _____

Q11.

LEVI

Let T be the set $\{z \in \mathbb{C} \mid |z| = 1\}$ and μ_∞ be the set of all roots of unity as follows.

$$\mu_\infty = \bigcup_{n=1}^{\infty} \mu_n = \mu_1 \cup \mu_2 \cup \dots$$

Prove or disprove that $T = \mu_\infty$.

End.

You may now submit your work.

Optional evaluation sheet

Unlike PCSA, submitting the sheet is **optional** for homeworks.

For each question so far, you can evaluate it based on the following criteria:

- If you failed to understand the question, mark $\times$ in the Evaluation column.
- If you understood the question, but didn't know how to solve it, mark $?$ in the Evaluation column.
- If you understood the question and are sure you have solved it, mark $\circ$ in the Evaluation column.
